WIEN2k 24.1 Install with gfortran

December 14, 2024

Linux Operating System Version (lsb_release -a): Ubuntu 24.04.1 LTS
Fortran Compiler Version (gfortran --version): gfortran 13.3.0
WIEN2k Version (cat $WIENROOT/WIEN2k_VERSION): 24.1 (Release 1/8/2024)

The Ubuntu 24.04.1 LTS was already installed, but if that is needed it should be available at:

https://ubuntu.com/download/desktop

Operating system packages that were needed were installed before proceeding with step 1 given below. If that hasn't been done, then install them:
username@computername:~$ sudo apt update
…
username@computername:~ $ sudo apt upgrade
…
username@computername:~ $ sudo apt install tcsh gfortran make autoconf libtool git
…
username@computername:~ $ sudo apt install gnuplot gnuplot-x11 libgd-dev gedit
…
username@computername:~$ sudo apt install libquadmath0 build-essential libglu1-mesa-dev
…
username@computername:~$ sudo apt install libtogl-dev tcl-dev tk-dev libfftw3-dev libxmu-dev
…

Note: If prompted with "Do you want to continue [Y/n]", enter: Y.

The XCrySDen 1.6.2 was installed using:

username@computername:~ $ sudo apt install xcrysden

Of note, for XCrySDen to work with Wayland, toglOpt(accum) needs set to false in the /usr/share/xcrysden/Tcl/custom-definitions file:

https://www.mail-archive.com/wien@zeus.theochem.tuwien.ac.at/msg23440.html

Restart the computer.

1. The following was entered into the terminal to install libxc:

   username@computername:~/Desktop$ cd ~
   useusername@computername:~$ wget
   https://gitlab.com/libxc/libxc/-/archive/7.0.0/libxc-7.0.0.tar.bz2
   ...

```
username@computername:~$ tar xvf libxc-7.0.0.tar.bz2
...
username@computername:~$ cd libxc-7.0.0/
username@computername:~/libxc-7.0.0$ autoreconf -i --force
...
username@computername:~/libxc-7.0.0$ ./configure FC=gfortran CC=gcc
--prefix=$HOME/libxc-7.0.0
...
username@computername:~/libxc-7.0.0$ make
...
username@computername:~/libxc-7.0.0$ make check
...
PASS: xc-run_testsuite
============================================================================
=======
Testsuite summary for libxc 7.0.0
============================================================================
=======
# TOTAL: 1
# PASS:  1
# SKIP:  0
# XFAIL: 0
# FAIL:  0
# XPASS: 0
# ERROR: 0
============================================================================
=======
...
username@computername:~/libxc-7.0.0$ make install
...
username@computername:~/libxc-7.0.0$ ls ~/libxc-7.0.0/lib
libxc.a  libxcf03.a  libxcf03.la  libxc.la  pkgconfig
```

2. The following was entered into the terminal to install OpenBLAS:

```
username@computername:~/libxc-7.0.0$ cd ~
username@computername:~$ wget
https://github.com/OpenMathLib/OpenBLAS/releases/download/v0.3.28/
OpenBLAS-0.3.28.tar.gz
...
username@computername:~$ tar xvf OpenBLAS-0.3.28.tar.gz
...
username@computername:~$ cd OpenBLAS-0.3.28/
username@computername:~/OpenBLAS-0.3.28$ make FC=gfortran CC=gcc
...
```

OpenBLAS build complete. (BLAS CBLAS LAPACK LAPACKE)

OS ... Linux
Architecture ... x86_64
BINARY ... 64bit
C compiler ... GCC (cmd & version : gcc (Ubuntu 13.3.0-6ubuntu2~24.04) 13.3.0)
Fortran compiler ... GFORTRAN (cmd & version : GNU Fortran (Ubuntu 13.3.0-6ubuntu2~24.04) 13.3.0)
Library Name ... libopenblas_zenp-r0.3.28.a (Multi-threading; Max num-threads is 32)
...
username@computername:~/OpenBLAS-0.3.28$ ls ~/OpenBLAS-0.3.28/libopenblas*
/home/username/OpenBLAS-0.3.28/libopenblas.a
/home/username/OpenBLAS-0.3.28/libopenblas.so
/home/username/OpenBLAS-0.3.28/libopenblas.so.0
/home/username/OpenBLAS-0.3.28/libopenblas_zenp-r0.3.28.a
/home/username/OpenBLAS-0.3.28/libopenblas_zenp-r0.3.28.so

username@computername:~/OpenBLAS-0.3.28$ gedit ~/.bashrc
...
XCRYSDEN_TOPDIR=/usr/bin
XCRYSDEN_LIB_BINDIR=/usr/lib
export XCRYSDEN_TOPDIR XCRYSDEN_LIB_BINDER

export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:$HOME/OpenBLAS-0.3.28

username@computername:~/OpenBLAS-0.3.28$ source ~/.bashrc

3. The following was entered into the terminal to install Open MPI:

username@computername:~/OpenBLAS-0.3.28$ cd ~
username@computername:~$ wget
https://download.open-mpi.org/release/open-mpi/v5.0/openmpi-5.0.6.tar.bz2
...
username@computername:~$ tar xvf openmpi-5.0.6.tar.bz2
...
username@computername:~$ cd openmpi-5.0.6/
username@computername:~/openmpi-5.0.6$ ./configure --prefix=$HOME/openmpi-5.0.6
...
Open MPI configuration:

Version: 5.0.6
MPI Standard Version: 3.1
Build MPI C bindings: yes
Build MPI Fortran bindings: mpif.h, use mpi, use mpi_f08
Build MPI Java bindings (experimental): no
Build Open SHMEM support: false (no spml)

Debug build: no
Platform file: (none)

Miscellaneous

Atomics: GCC built-in style atomics
Fault Tolerance support: mpi
HTML docs and man pages: installing packaged docs
hwloc: internal
libevent: internal
Open UCC: no
pmix: internal
PRRTE: internal
Threading Package: pthreads

Transports

Cisco usNIC: no
Cray uGNI (Gemini/Aries): no
Intel Omnipath (PSM2): no (not found)
Open UCX: no
OpenFabrics OFI Libfabric: no (not found)
Portals4: no (not found)
Shared memory/copy in+copy out: yes
Shared memory/Linux CMA: yes
Shared memory/Linux KNEM: no
Shared memory/XPMEM: no
TCP: yes

Accelerators

CUDA support: no
ROCm support: no

OMPIO File Systems

DDN Infinite Memory Engine: no
Generic Unix FS: yes
IBM Spectrum Scale/GPFS: no (not found)
Lustre: no (not found)
PVFS2/OrangeFS: no

username@computername:~/openmpi-5.0.6$ make all install
...
username@computername:~/openmpi-5.0.6$ gedit ~/.bashrc
...

```
export PATH=$PATH:$HOME/openmpi-5.0.6/bin

export
LD_LIBRARY_PATH=$LD_LIBRARY_PATH:$HOME/OpenBLAS-0.3.28:$HOME/openmpi
-5.0.6/lib
...
username@computername:~/openmpi-5.0.6$ source ~/.bashrc
username@computername:~/openmpi-5.0.6$ which mpicc
/home/username/openmpi-5.0.6/bin/mpicc
```

4. The following was entered into the terminal to install fftw:

```
username@computername:~/openmpi-5.0.6$ cd ~
username@computername:~$ wget https://www.fftw.org/fftw-3.3.10.tar.gz
...
username@computername:~$ tar xvf fftw-3.3.10.tar.gz
...
username@computername:~$ cd fftw-3.3.10/
username@computername:~/fftw-3.3.10$ ./configure FCC=gfortran CC=gcc MPICC=mpicc --
enable-mpi --prefix=$HOME/fftw-3.3.10
...
username@computername:~/fftw-3.3.10$ make
...
username@computername:~/fftw-3.3.10$ make install
...
username@computername:~/fftw-3.3.10$ ls ~/fftw-3.3.10/include ~/fftw-3.3.10/lib
/home/username/fftw-3.3.10/include:
fftw3.f    fftw3.h     fftw3l-mpi.f03  fftw3-mpi.h
fftw3.f03  fftw3l.f03  fftw3-mpi.f03   fftw3q.f03

/home/username/fftw-3.3.10/lib:
cmake  libfftw3.a  libfftw3.la  libfftw3_mpi.a  libfftw3_mpi.la  pkgconfig
```

5. The following was entered into the terminal to install ScaLAPACK:

```
username@computername:~/fftw-3.3.10$ cd ~
username@computername:~$ wget
https://github.com/Reference-ScaLAPACK/scalapack/archive/refs/tags/v2.2.0.tar.gz
...
username@computername:~$ tar xvf v2.2.0.tar.gz
...
username@computername:~$ cd scalapack-2.2.0/
username@computername:~/scalapack-2.2.0$ cp SLmake.inc.example SLmake.inc
username@computername:~/scalapack-2.2.0$ gedit SLmake.inc
username@computername:~/scalapack-2.2.0$ cat SLmake.inc
############################################################################
```

```
#
#  Program:         ScaLAPACK
#
#  Module:          SLmake.inc
#
#  Purpose:         Top-level Definitions
#
#  Creation date:   February 15, 2000

/home/username/scalapack-2.2.0/libscalapack.a
```

6. The following was entered into the terminal to install ELPA:

```
username@computername:~/scalapack-2.2.0$ cd ~
username@computername:~$ wget
https://gitlab.mpcdf.mpg.de/elpa/elpa/-/archive/release_2024_05_001/elpa-
release_2024_05_001.tar.bz2
username@computername:~$ tar xvf elpa-release_2024_05_001.tar.bz2
...
username@computername:~$ cd elpa-release_2024_05_001/
username@computername:~/elpa-release_2024_05_001$ ./autogen.sh
...
username@computername:~/elpa-release_2024_05_001$ ./configure CFLAGS="-march=native"
CPPFLAGS="-I$HOME/openmpi-5.0.6/include"
SCALAPACK_LDFLAGS="-L$HOME/scalapack-2.2.0/"
LDFLAGS="-L$HOME/OpenBLAS-0.3.28 -L$HOME/openmpi-5.0.6/lib"
--prefix=$HOME/elpa-release_2024_05_001 --disable-avx512
...
The following ELPA2 kernels will be build:

 real_generic
 real_generic_simple
```

```
 real_generic_simple_block4
 real_generic_simple_block6
 real_sse_block2
 real_sse_block4
 real_sse_block6
 real_sse_assembly
 real_avx_block2
 real_avx_block4
 real_avx_block6
 real_avx2_block2 (default)
 real_avx2_block4
 real_avx2_block6
 complex_generic
 complex_generic_simple
 complex_sse_block1
 complex_sse_block2
 complex_sse_assembly
 complex_avx_block1
 complex_avx_block2
 complex_avx2_block1 (default)
 complex_avx2_block2

 This version of ELPA support the minimal API version: 20170403
 The current API version is: 20241105
 This version of ELPA support the minimal autotuning version: 20171201
 The current autotune version is: 20241105
...
username@computername:~/elpa-release_2024_05_001$ make
...
username@computername:~/elpa-release_2024_05_001$ make install
...
username@computername:~/elpa-release_2024_05_001$ ls ~/elpa-release_2024_05_001/lib
~/elpa-release_2024_05_001/include/elpa-2024.05.001/elpa

```

7. Go to:
   http://www.wien2k.at/reg_user/index.html

8. Click "Code download (after registration)"

9. Enter your username and password that you were given when you purchased WIEN2k.

10. Click the link "here" in "You can download the complete source code (about 170 MB) from here" to download "WIEN2k_24.1.tar". You should now have the source code package for WIEN2k 24.1.

11. If you have the folder "WIEN2k" in your Linux operating system home directory (for example at /home/username/WIEN2k, where username is replaced by your user name). You can rename it something else, such as "WIEN2k23.2".

12. The following was entered into the terminal to install WIEN2k 24.1:

```
username@computername:~/elpa-release_2024_05_001$ cd ~
username@computername:~$ mkdir WIEN2k
username@computername:~$ cd WIEN2k/
username@computername:~/WIEN2k$ ls
WIEN2k_24.1.tar
username@computername:~/WIEN2k$ tar xvf WIEN2k_24.1.tar
...
username@computername:~/WIEN2k$ gunzip *.gz
username@computername:~/WIEN2k$ chmod +x ./expand_lapw
username@computername:~/WIEN2k$ export LC_NUMERIC=en_US.UTF-8
username@computername:~/WIEN2k$ ./expand_lapw
...
continue (y/n)
y
...

Applied patches at: https://github.com/gsabo/WIEN2k-Patches/tree/master/24.1

username@computername:~/WIEN2k$ ./siteconfig

Compile time errors (if any) were:

<= It should be blank here if successful.

Check file compile.msg in the corresponding SRC_* directory for the compilation log and more info on any compilation problem.

Press RETURN to continue

...

Please enter the full path of the perl program: /usr/bin/perl

...

Press RETURN to continue

...

Please enter the full path to your temporary directory: /tmp

...

Press RETURN to continue

...

13. If it is the first time installing WIEN2k on the computer, enter in the terminal:

username@computername:~/WIEN2k$ ./userconfig_lapw

...

Specify your prefered editor (default is emacs):
editor shall be: gedit

Set editor to gedit (Y/n) Y

Specify your prefered DATA directory, where your cases should be stored (for /home/username/WIEN2k, just enter RETURN key):
DATA directory: /home/username/wiendata

Set DATA directory to /home/username/wiendata (Y/n) Y

Specify your prefered scratch directory, where big case.vector files can be stored (Recommended is a local directory (maybe /scratch), not a

NFS directory. For your working directory, just enter RETURN key):
scratch directory:

Set scratch directory to working directory (Y/n) Y

Specify your program to read pdf files (default is okular)
(on some Linux systems use xpdf, evince, pdfstudio, ...):evince

Set PDFREADER to evince (Y/n) Y

WIEN2k can use OpenMP parallelization on multicore computers.
For details please read the "Parallelization section" of the Usersguide.
Your present computer has 6 cores, but more than 4 (8) cores is useless.
How many cores do you want to use by default (4):1

Set OMP_NUM_THREADS to 1 (Y/n) Y

!!! The following lines will be added to your .bashrc file if you continue !!!
A copy of your current .bashrc will be saved under .bashrc.savelapw !

```
# added by WIEN2k: BEGIN
# ------------------------------------------------------
